# What is the workshop about?

Students from around the world will come together in a 2h online workshop to **share our experiences** of current higher sustainability education and **co-create joint visions** of its future.

The aim is to bring the students' perspectives into the discourse on higher sustainability education by exploring what it should contain, how it should be organised, which approaches are used etc.

Previous research shows that **student participation** in the development of their study programmes and curricula **is a valuable resource** that often remains unused. This is because students are often not actively involved in designing and further developing their study programmes.

Instead, they are asked for their passive perceptions e.g., through standardized evaluation forms. This unidirectional form of feedback lacks exchange about what quality education means to students and does not **ensure that their ideas and perspectives are equally considered** and incorporated in programme development.

# Why This Topic?

# About Me

My name is **Silvio Nießner** and I am a student in the Master of Science programme **Sustainable Technology** at KTH Royal Institute of Technology in Stockholm. I have a background in industrial engineering and have worked in different projects to contribute to a sustainable society by reducing environmental pollution and exploitation.

I am looking forward to our exchange on future sustainability education and feel free to contact me any time by mail if you have any remaining questions: [niessner@kth.se](mailto:niessner@kth.se)
